

Enabling electrification

Elonroad
19 March 2024

The crazy idea

20%

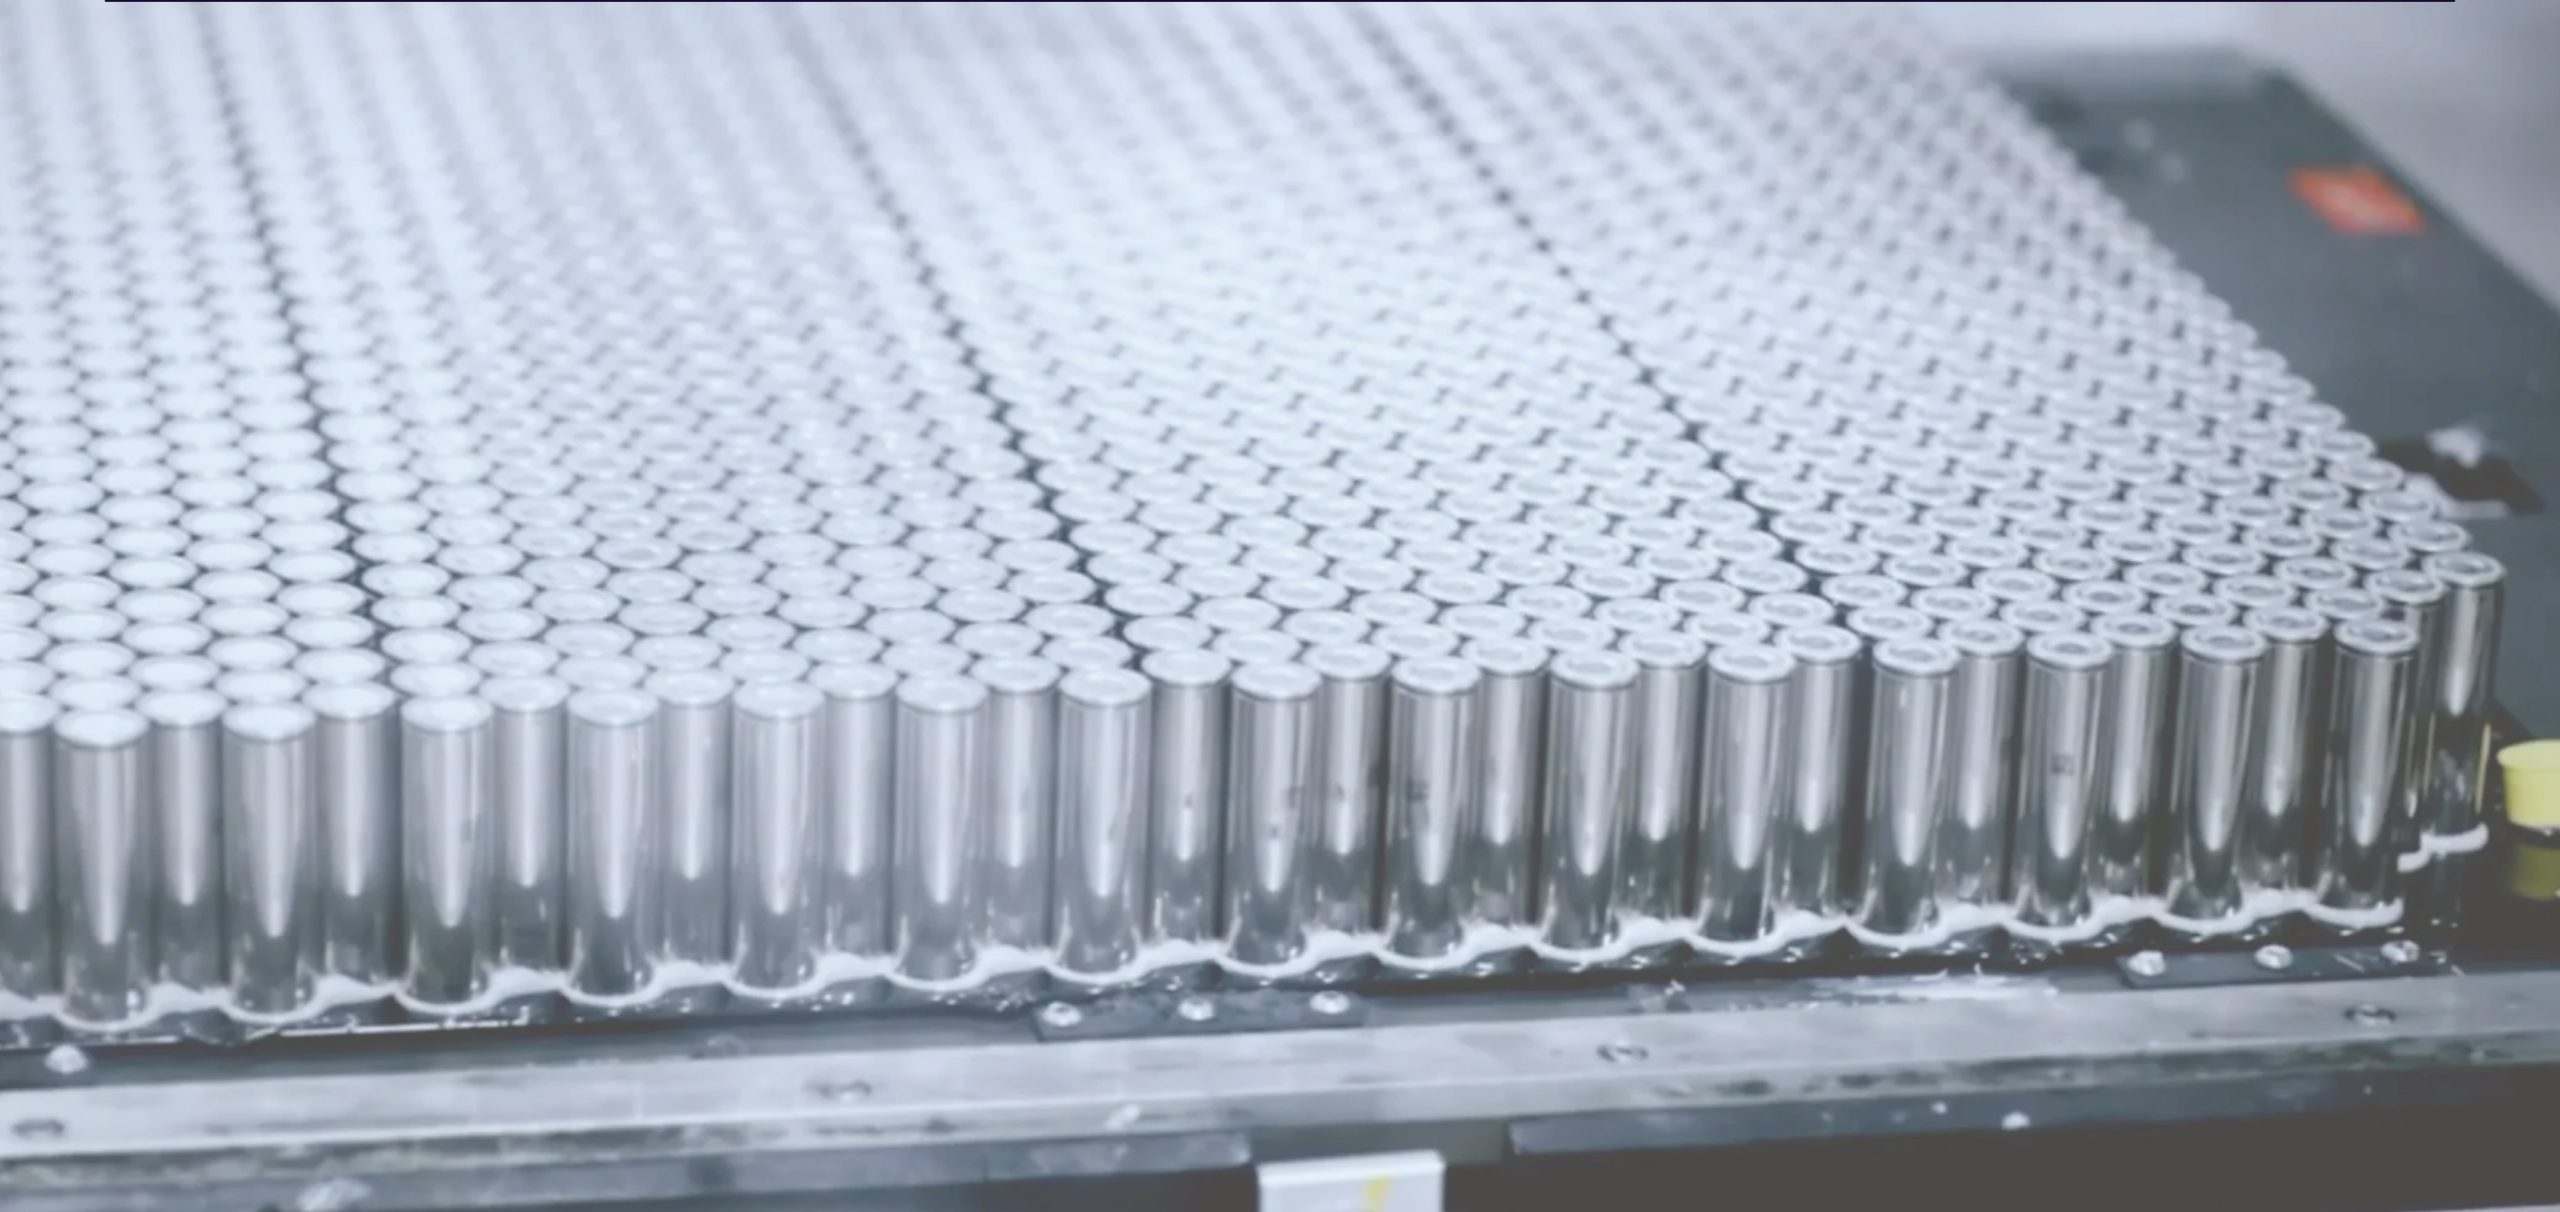

Our limited imagination

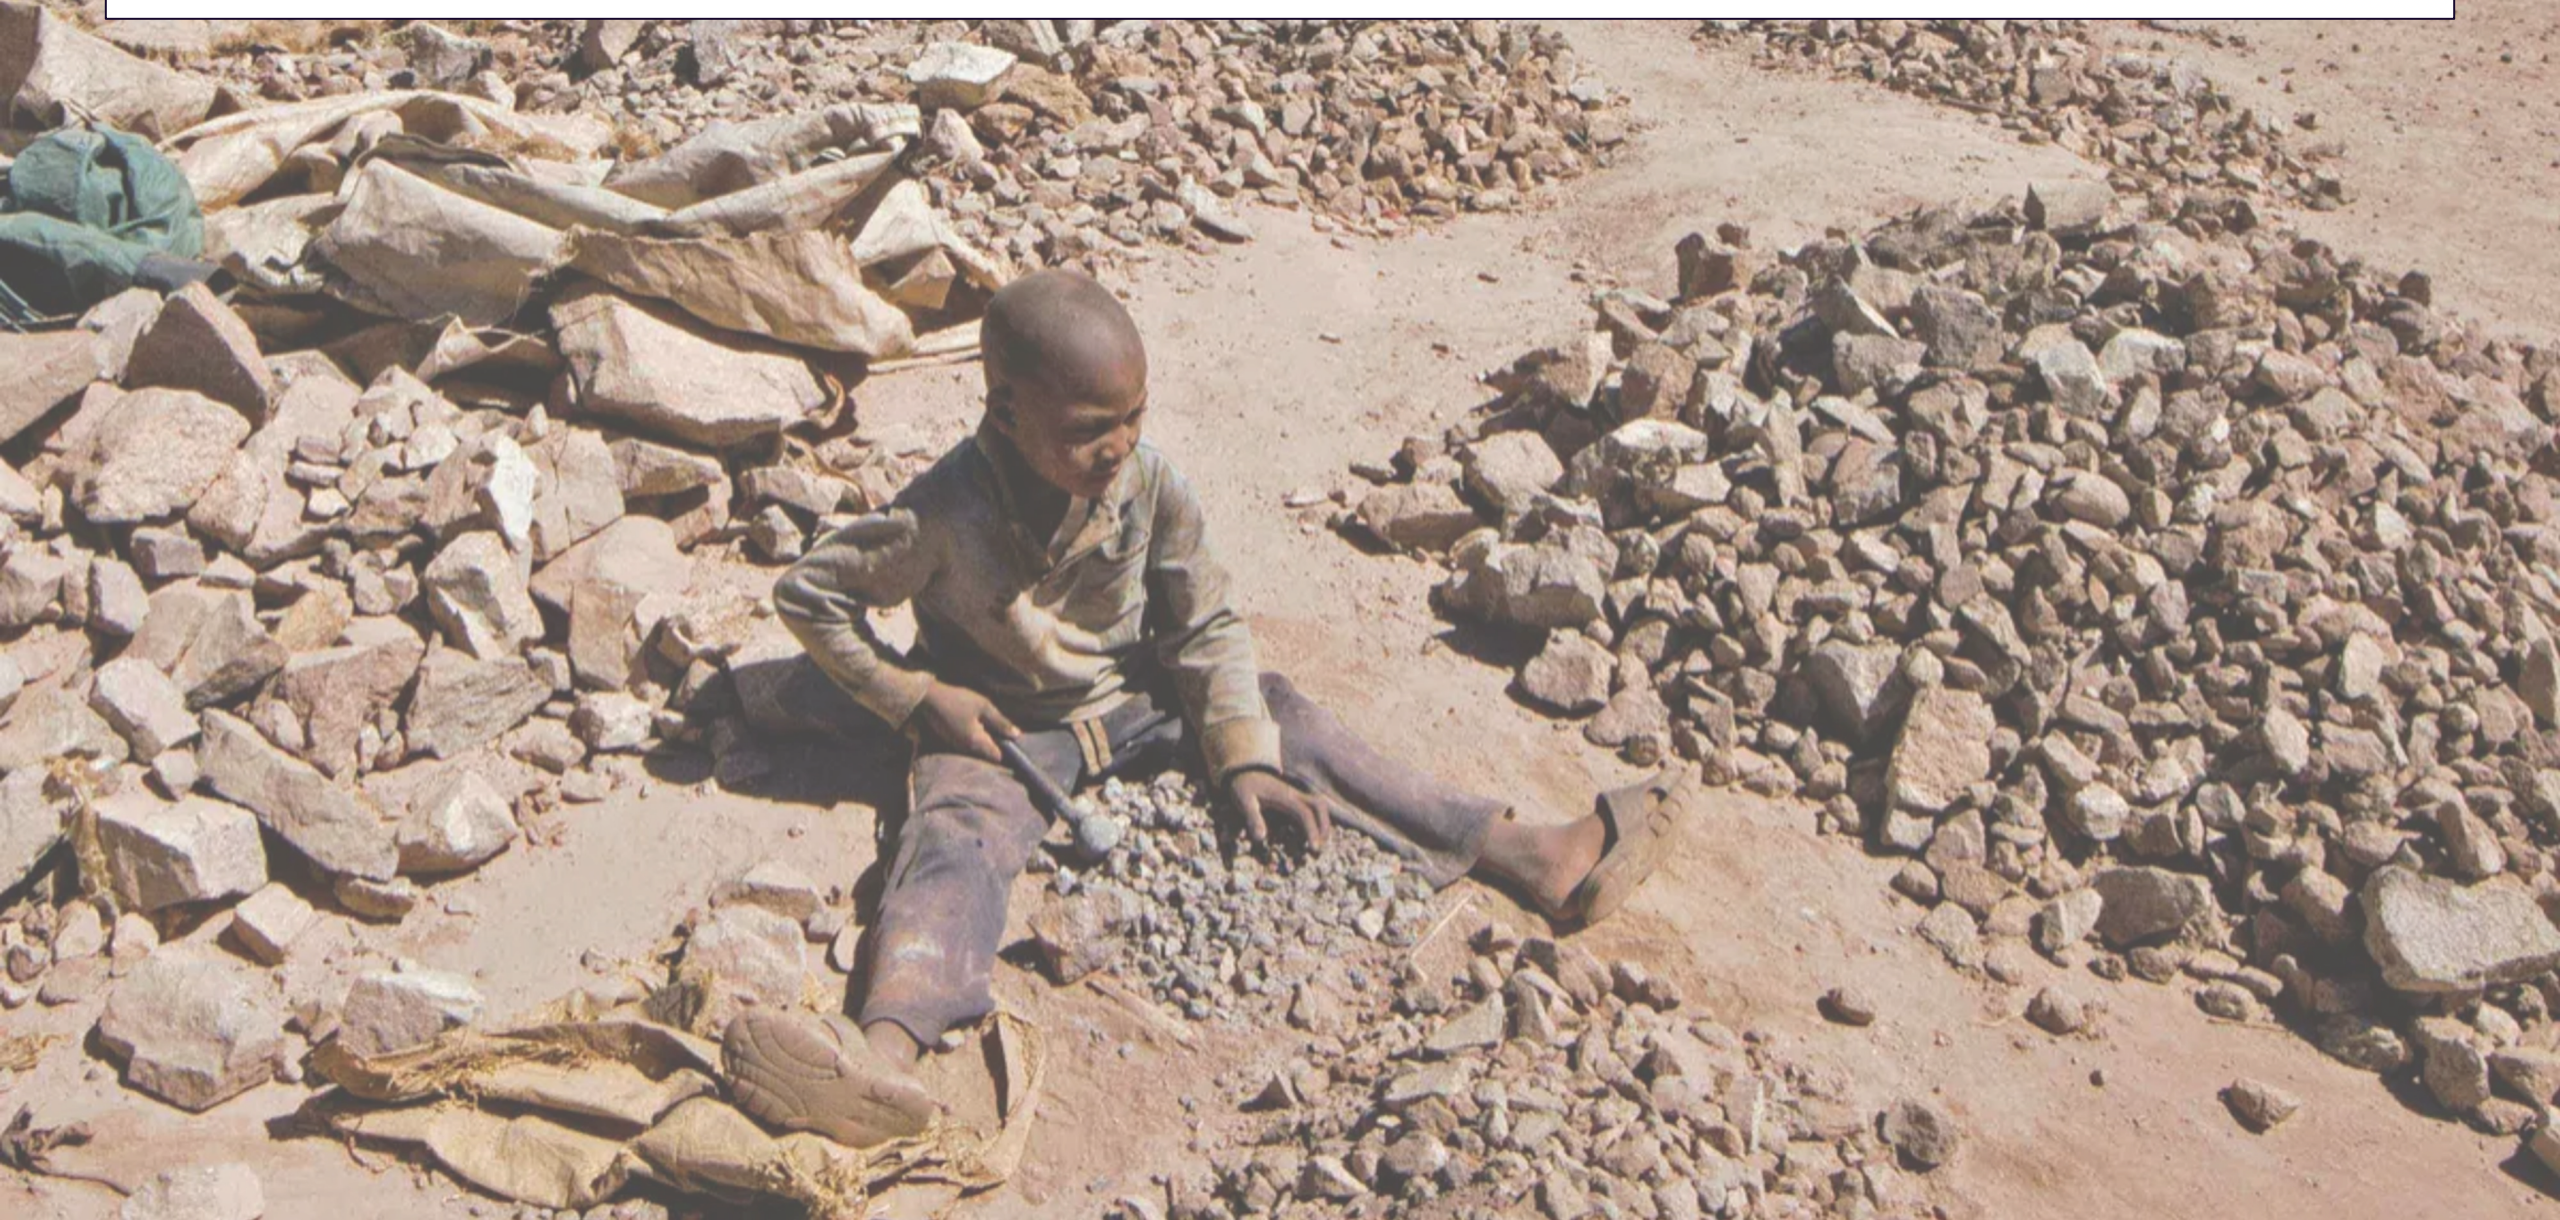

Electrification can mitigate climate change

But we cannot rely on large car batteries

1. Cost of scarce resources

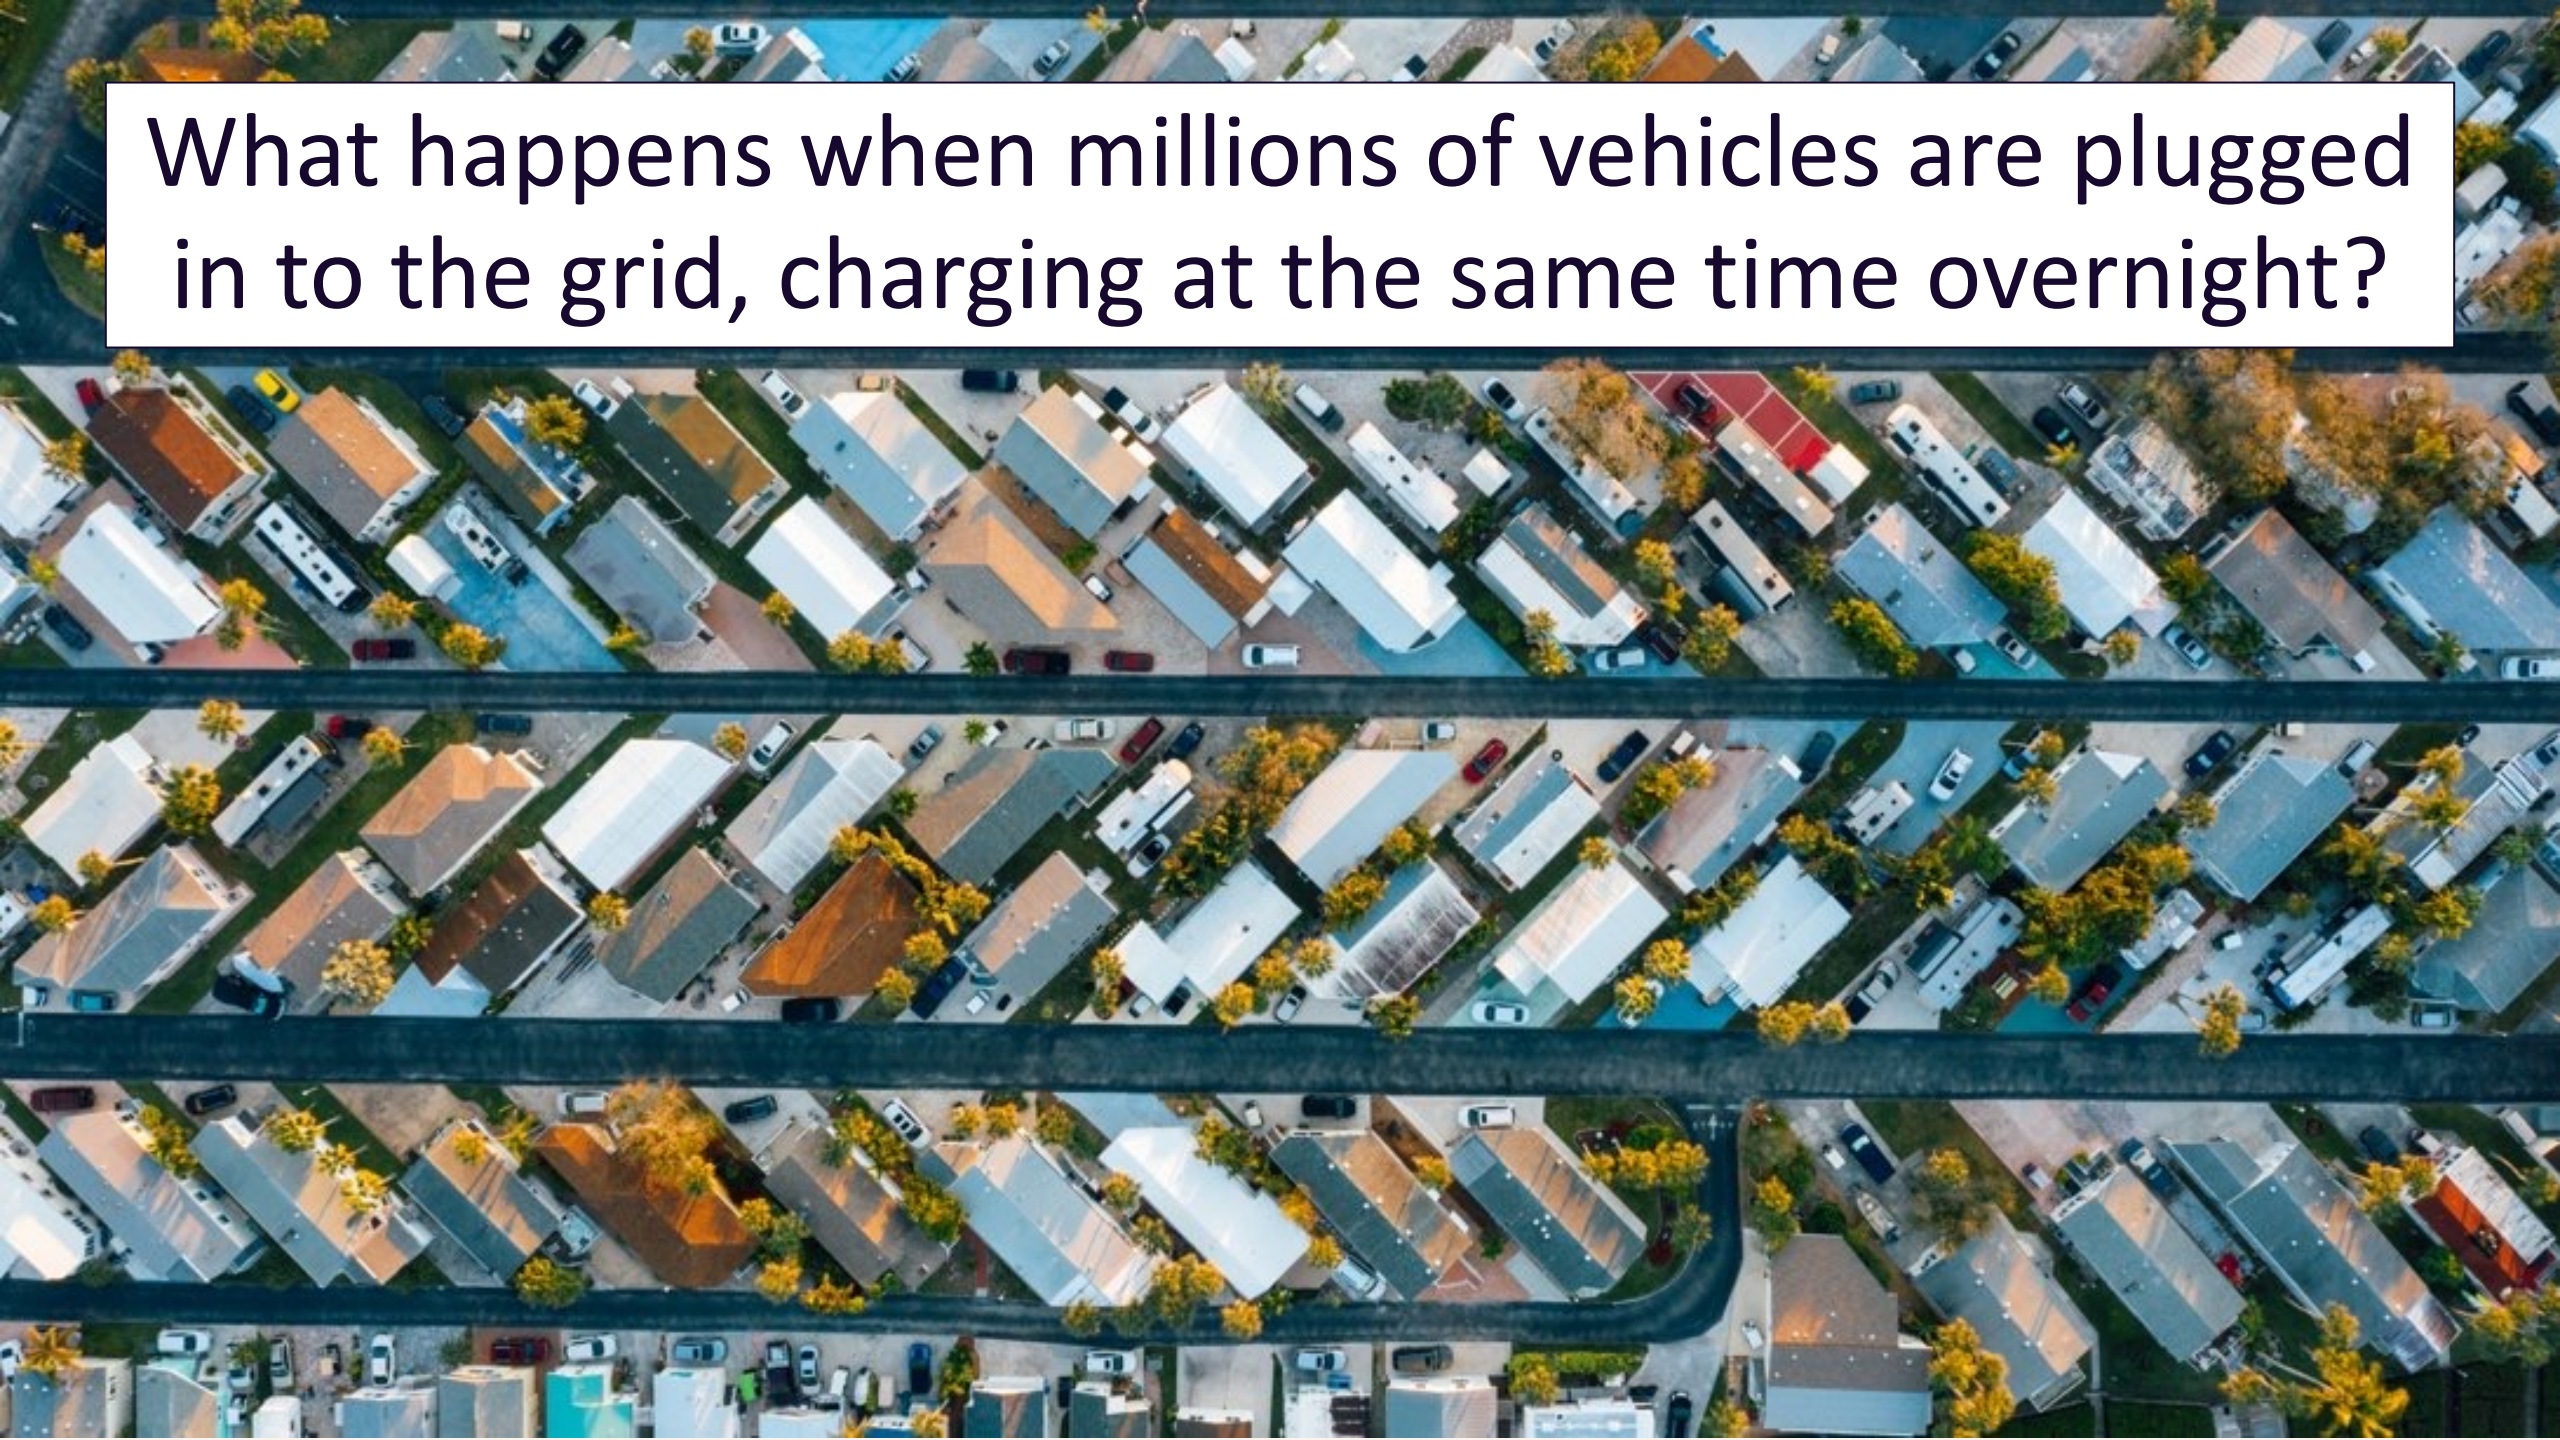

2. Weight and energy waste

3. Space for charging

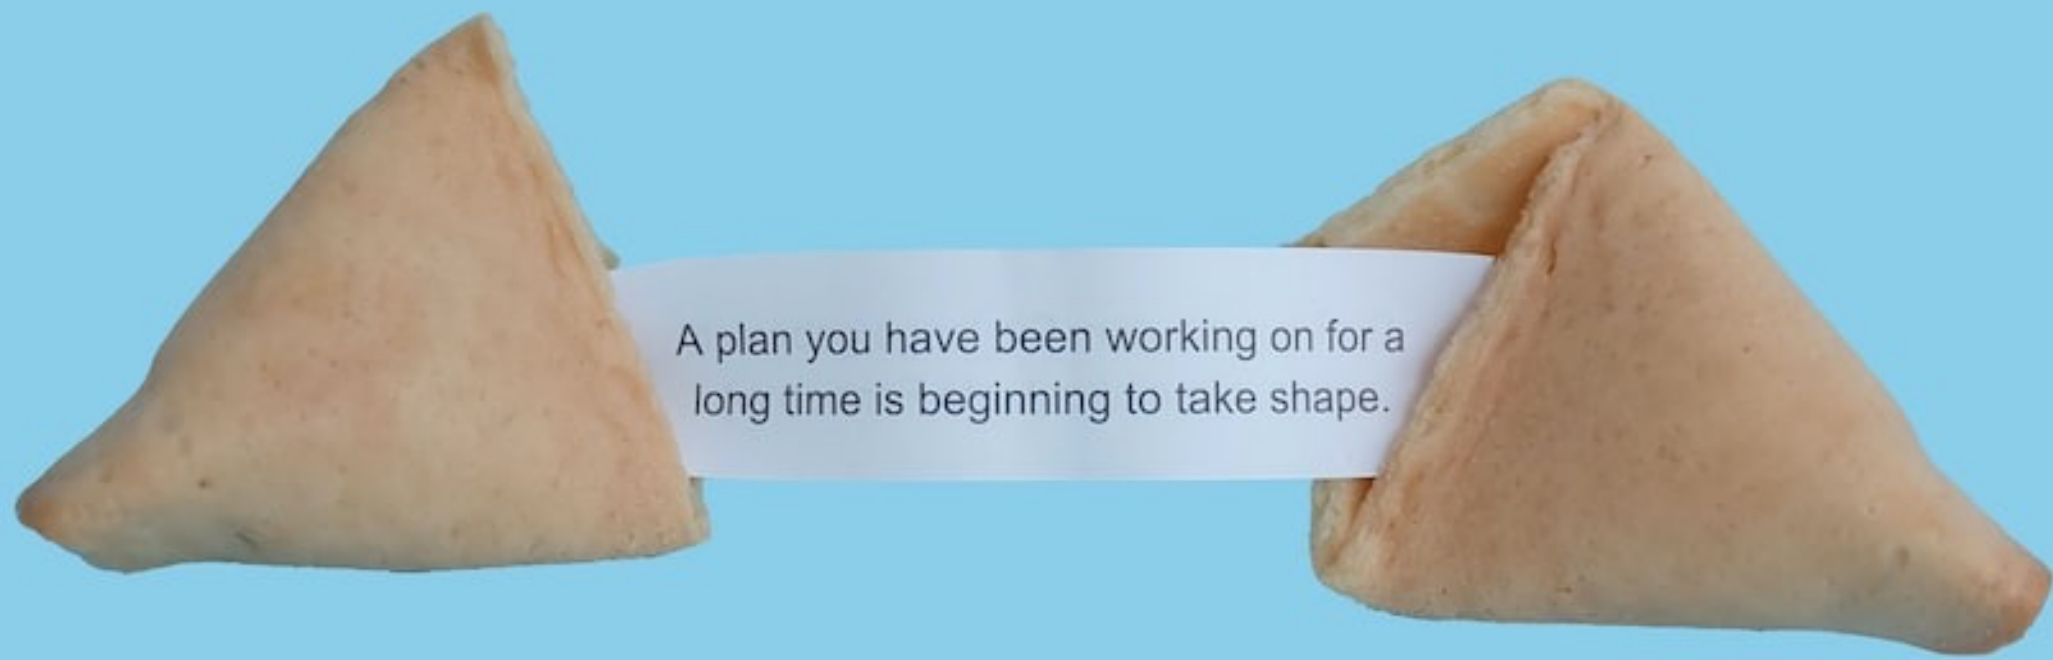

What happens when millions of vehicles are plugged in to the grid, charging at the same time overnight?

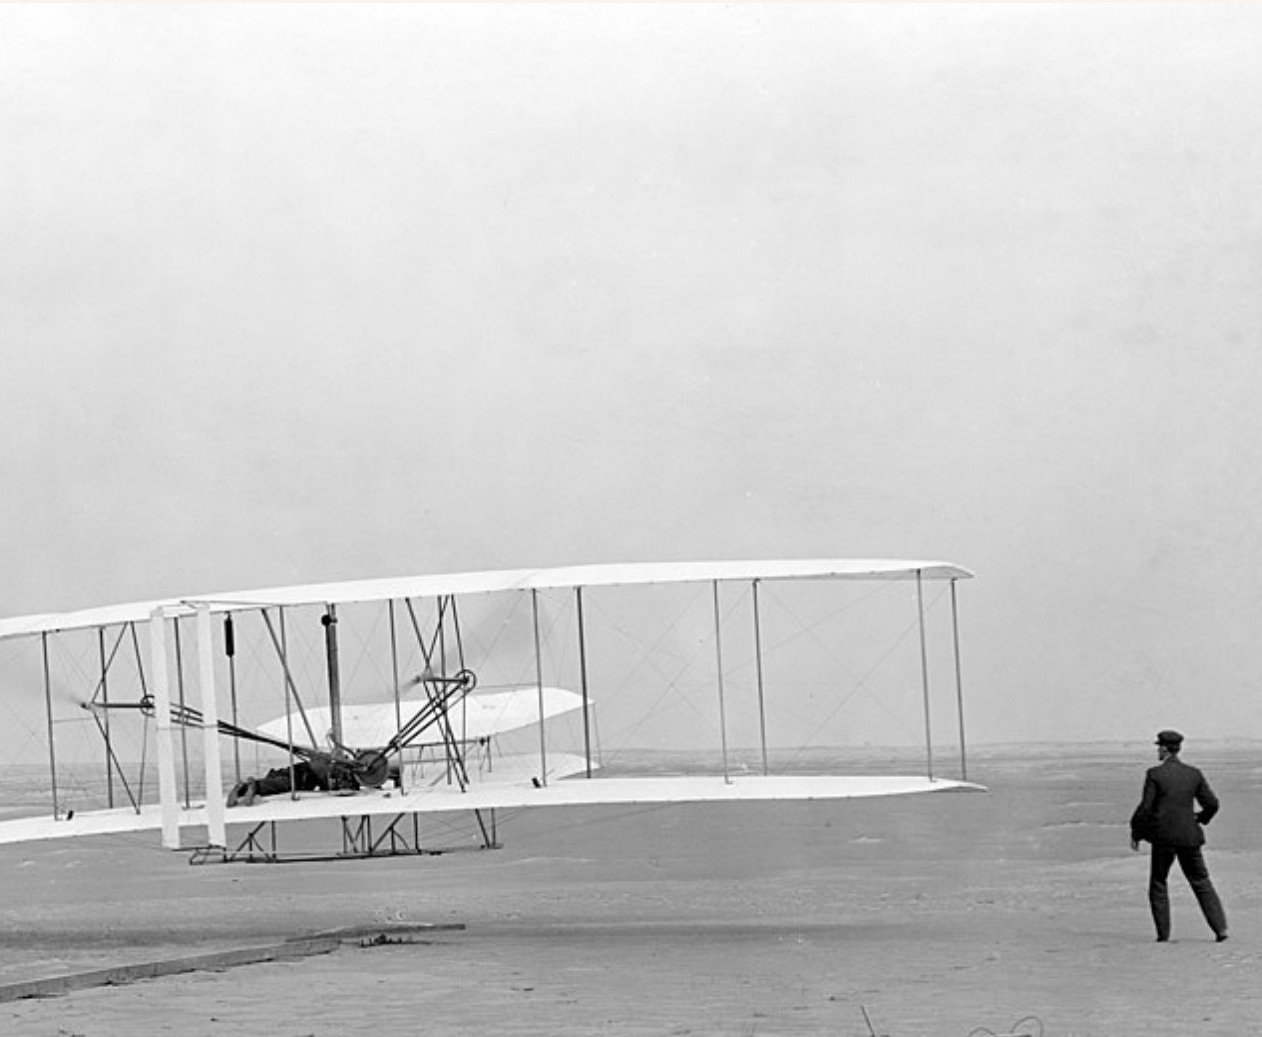

Who is going to charge all those autonomous vehicles driving around all day?

A plan you have been working on for a long time is beginning to take shape.

There were only 66 years between the Wright Brothers' first flight, and we landed on the moon. Imagine what we can achieve in the coming decade.

We are momentum.
Join us in connecting goods and
people seamlessly.
